/note="Vector: pSPORT1; Site 1: Not 1; Site 2: Sal 1; Five libraries representing E10.571.5 pancreatic bud, E16.5 pancreas, newborn pancreas, adult pancreas, and adult islets of Langerhans were seperately constructed using SuperScript Plasmid Library kit (Life Technologies). cDNA was made by oligo-dT priming and size-selected by column fractionation. Libraries were amplified once on solid support and plasmid DNA from each library DNA was normalized by method #4 from Bonaldo, Lennon, and Soares 1996 Genome Research 6:791-806; O.5 microgram single-stranded mixed library plasmid DNA was nicrogram single-stranded mixed library plasmid DNA was incrogram product representing mixed library lasmid DNA was nicrogram single-stranded mixed library plasmid DNA was mixed with single-stranded mixed library plasmid DNA was mixed library lasmid DNA was mixed library plasmid DNA was mixed library plasmid DNA was mixed library plasmid DNA was mixed library lasmid DNA was lasmid DNA was mixed library lasmid DNA was mixed library lasmid DNA was lasmid DNA w

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Centricon 100. Then, the CDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Salt+6. The products were purified by phenol/chloroform and Centricon 100. The CDNAs were digested with Sall and NotI enzymes and cloned into Sall/NotI site of pSPORTI plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 3.2 kb. The library was constructed by Yulan Piao."

Kato I;

Onishi Y,

Antigenic proteins from the fungus Malassezia - bind to IgE antibodies present in patients with Malassezia allergies, useful for diagnosis, treatment and prevention of such conditions. WPI; 1997-332788/30. P-PSDB; AAW29770.

Claim 53; Page 76-77; 162pp; Japanese.

The present sequence encodes a specifically claimed antigenic protein

/product= "MR-4_antigenic_protein"

isolated from the fungus Malassezia. The antigenic protein can bind to IgE antibodies present in patients with allergic conditions. Antigenic proteins, peptides and mucleic acids from the fungus Malassezia can be used in the diagnosis, treatment and prevention of allergic conditions due to Malassezia organisms (such as M.furfur, M. sympodialis and M.pachydermatitis). (Updated on 27-AUG-2003 to correct OS field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         554 TCTGGGAGCACGCTTTCTACCTTCAGTACAAGAACGTCAAGCCTGACTATCTCGCTGCTG 613
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence encodes a specifically claimed antigenic protein isolated from the fungus Malassezia. The antigenic protein can bind to IGE antibodies present in patients with allergic conditions. Antigenic proteins, peptides and nucleic acids from the fungus Malassezia can be used in the diagnosis, treatment and prevention of allergic conditions due to Malassezia organisms (such as M.furfur, M. sympodialis and M.pachydermatitis). (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antigenic proteins from the fungus Malassezia - bind to IgE antibodies present in patients with Malassezia allergies, useful for diagnosis, treatment and prevention of such conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ACTIGGCICCCIAIGGAICCGAGGAGGCIACCCICTCIGAAGGACCICTCAAGAAGGCIA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a PCR amplification fragment of the MF-4 antigenic protein isolated from the fungus Malassezia. The antigenic peptide can bind to IgB antibodies present in patients with allergic conditions. Antigenic proteins, peptides and nucleic acids from the fungus Malassezia can be used in the diagnosis, treatment and prevention of allergic conditions due to Malassezia organisms (such as M.furfur, M. sympodialis and M.pachydermatitis). ```
The invention relates to a novel array comprising at least two isolated nucleotide molecules, each molecule having a sequence capable of uniquely hybridising to a nucleic acid molecule which is an expression product of a gene involved in mitochondrial blology. The array comprises two or more isolated nucleic acid molecules or spots, each molecule having a sequence chosen from sequence of 994 human probes and 2046 mouse probes. An array
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Array containing probes for genes involved in mitochondrial biology, useful for determining mitochondrial biology gene expression profiles for use in diagnosing pathologies and identifying biochemical pathways.

```

The first invention is useful in the conditions allowing an expression picture of a conditions allowing selective hybridisation, and measuring hybridisation of nucleic acid in the sample to the array to produce an expression profile. The array is also useful for determining an expression profile. The array is also useful for determining an expression profile. The array is also useful for determining an expression profile of a first labelled sample containing nucleic acid. The second sample is a reference or a standard. An array is useful for determining an expression profile diagnostic of an energy-metabolism-condition. An array of the invention is useful for determining mitochondrial biology gene expression profiles of organisms, canch as human, mice and closely related species, tissue and organisms, such as human, mice and closely related species, tissue and organisms, canch are useful for determining expression profiles of diagnostic of energy metabolism-related physiological conditions, identifying biochemical conditions, diagnostic of energy metabolism-related physiological conditions, identifying therapeutic agents useful for preventing and/or reating such physiological conditions, evaluating and/or monitoring the efficacy of physiological conditions, evaluating and identifying and madels of human cenergy metabolism-related physiological conditions. An array is also useful for defining expression signatures or profiles for mitochondrial condition oxidative nhormhorvlation (OxpHoR) dusfunction, oxidative result from oxidative nhormhorvlation (OxpHoR) dusfunction, oxidative result from oxidative phosphorylation (OXPHOS) dysfunction, oxidative stress, apoptosis and aging. An array of the invention contains probes of genes not previously recognised to participate in mitochondrial biology. The sequences shown in ADD31224-ADD35260 represent murine mitochondrial DNA clones used to make the probes of the invention. Some sequences are not present, these are SEQ ID NO's 295, 1174, 1213, 1700, 1728, 1730, 1905, the invention is useful for determining an expression profile of a 2408 and 2643.

The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the global changes in gene expression in tissues or cells exposed to the coxin and comparing these to gene expression in unexposed tissues or cells. Also included are methods of predicting at least one toxic effect of a compound or progression of a toxic effect, preferably the hepatocoxicity of a compound, comprising detecting the level of expression in a tissue or cell sample exposed to the compound of two or more genes listed in the specification, where differential expression of the genes is indicative of at least one toxic effect or progression of the genes and predict cellular pathways that a compound modulates the toxic response and predict cellular pathways that a compound modulates in a cell. The methods utilise a set of at least two probes on a solid support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer system comprising at ababase containing information identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a cell and a substitution of a present information and a user interface to view the information present information and a user interface to view the information where the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the probes of the

prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound or agent. Hepatotoxicity is characterised by centrilobular necrosis and steatosis. The present sequence is an expressed sequence tag (BST) or cDNA derived from a gene which is differentially expressed in response to a hepatotoxic agent
                                                                                                                                                                                                                                                                                                    248

The present invention relates to a method for predicting a toxic effect of a compound. The method comprises preparing a gene expression profile cof a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database compusing SEQ ID 1-4925, where differential expression of the gene indicates at least one toxic effect. The method is useful for predicting at least one toxic effect. The method is useful for predicting at least one toxic effect of a compound, identifying an agent that modulates the onset or progression of a toxic response, predicting the cellular pathways that a compound modulates in a cell, and identifying an agent that modulates at least one activity of a protein. The method and compositions of the present invention using a database of genes having liver toxin-induced differential expression, are useful in identifying toxicity markers in sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

ftp.wipo.int/pub/published_pct_sequences.

Predicting a toxic effect of a compound, useful in identifying toxicity markers in liver tissues or cells for drug screening and toxicity assays, comprises preparing gene expression profile of tissue or cells exposed to the compound.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The specification describes the use of a recombinant adeno-associated virus (rAN) composition. The rANV comprises a polymucleotide sequence encoding a mammalian catalase or superoxide dismutase polymeptide to reduce demyelination in an optic nerve. The rANV are useful for scavenging reactive oxygen species in a mammal suspected of having optic neuritis, to reduce the effects of demyelinating disease in a mammal and prophylactically used to suppress blood brain barrier disruption in a mammal having identified allergic encephalomyelitis. The rAAV composition is useful for reducing symptoms associated with demyelinating diseases such as optic neuritis, multiple sclerosis, allergic encephalomyelitis, where the symptoms associated with these disease include optic disk edema, increase of optic nerve cell count, disruption of blood brain demyelination of axons. The present sequence is expressed using the rAAV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2
